Datasheet – ActiveSync

accessmyLAN™

Introduction

Businesses of all sizes need to gain competitive advantage by increasing productivity and efficiency, managing costs and getting the maximum return on investment. Providing mobile and remote workers with access to key business applications delivers higher employee productivity and efficiency by enabling employees to maximise their work time, by improving information flows and by enabling the business to respond quickly in a dynamic environment.

Secure and Easy Mobile e-mail

The AccessMyLan ActiveSync service provides a secure and easy way to connect mobile handsets to your Exchange server to give real-time access to e-mail, calendar and contacts. The ActiveSync service removes the deployment complexity of Exchange Direct Push e-mail (ActiveSync) to remote handsets while enhancing security. Using AccessMyLan, the IT administrator need only add the ActiveSync capability to a users account via our intuitive Web Admin and then follow the personalised instructions to configure the handset. No client software is needed on the mobile device.

Benefits

- Enables mobile Exchange on iPhone, Windows Mobile and Nokia handsets
- Quick installation and rollout without requiring any additional server hardware or digital certificates
- No changes required to network infrastructure or configuration
- Control costs with fixed monthly charge and no minimum contract period

Enhanced Security

AccessMyLan provides an enhanced security environment removing complexity and cost of securing and managing mobile Exchange.

- No inbound ports open on the firewall
- Internal Exchange infrastructure is not exposed to the Internet
- Devices authorised before access to Exchange server is permitted
- Remote handsets locked to user by unique device identifier
- Full logging and access controls

AccessMyLan has improved our service levels to our external employees. Its ease of deployment and ease of admin make this product a brilliant addition to the services we offer to our internal customers

Technical Overview

The AccessMyLan ActiveSync service is a proxy and protocol inspection firewall hosted in the AccessMyLan service cloud that provides the following features:

- Secure transport for ActiveSync communications between handsets and Exchange server
- Removes requirement for ISA server and front-end Exchange servers
- Enforcement of SSL encryption on all communications over the Internet from the handset
- Authorisation of the remote handset and binding each handset to the user
- Supervision of ActiveSync requests to the corporate Exchange server
- Enforcement of login failure lockout policies
