O'DONNELL SWEENEY
EVERSHEDS

Enabling staff with access to e-mail and company information while on the move or working remotely is a challenge given the variety of ways that users wish to connect and the security issues that arise from providing remote access.

AccessMyLan addresses these challenges by offering a comprehensive solution for all access methods that is secure and reliable.

Complete Mobility

Benefits

Increase Productivity

Empower staff with remote access to deliver improved response to business events and removal of delays in business processes.

Control Cost

Remove the cost associated with specialist staff and hardware maintenance. With AccessMyLan you can add and remove users as required so you only pay for what you need.

Good for Your Business

Get best-in-class security and peace of mind from a highly available and resilient service.

About the Service

AccessMyLan is a fully featured remote access VPN service that provides secure access to the office network from remote PCs, laptops, mobile phones and web browsers.

Empower your remote and mobile staff with secure access to their business tools whether at home, on the road or at a remote location.

The service does not require any new hardware or changes to network settings so you can be up and running in minutes.

With AccessMyLan, your business benefits from having a cost-effective solution to all your remote access and mobility challenges and avoids the complexity and cost of having multiple solutions for mobile e-mail, remote PC and web based access. All users can be enabled for all access methods giving your staff the flexibility to work

anytime, anywhere using whatever device is most convenient for them.

With no up-front costs for installation services or hardware and the flexibility to add and remove users as your needs dictate, AccessMyLan provides you with the most cost effective solution for staff mobility.

Connecting to the Office

Benefits

Simple to Install

The service can be installed in minutes with no need to change your firewall or network infrastructure.

Easy User Setup

Remote users can be setup quickly and easily via e-mail and SMS making deployment easy and error free.

Secure

No inbound ports open on the firewall and comprehensive access control features.

No additional hardware

The small footprint service installs on an existing Windows server and does not require dedicated hardware.

Secure Access from a PC or Laptop

The AccessMyLan VPN Client provides full connectivity to the office network from a remote PC over any Internet connection. With the client installed, remote users have a full in-office experience and can map network drives, run applications on servers and access e-mail. The VPN Client seamlessly integrates with the office DNS so that applications do not need to be reconfigured when staff switch between remote and office working. The VPN Client installer is less than 1.5MB and can be self-installed by the remote user from an e-mail invitation from AccessMyLan.

Exchange ActiveSync on Mobile Phones

The AccessMyLan ActiveSync service provides secure connectivity from any ActiveSync capable phone to Microsoft Exchange servers giving users real-time access to their e-mail, contacts and calendar. Mobile

Exchange deployment and management is greatly simplified by removing the requirement to reconfigure firewalls and install ISA servers.

Use a Web Browser for Access

The AccessMyLan Web Portal provides a secure and easy way to access internal web-based applications and file shares. Using just a web browser, remote users can access their e-mail, Intranet, web applications and file shares without installing any software on the remote system. The Web Portal removes the requirement to open inbound ports on your firewall reducing the attack surface for would-be hackers. A digital certificate is not required on the internal servers as the Portal enforces SSL encryption on all browser sessions through an AccessMyLan certificate.

Advanced Features

High Availability

The High Availability of AccessMyLan provides instant failover in the event of a server failure and transparent failover support where multiple Internet connections are in use.

Disaster Recovery

In a disaster recovery scenario, AccessMyLan will transparently failover to the recovery site without any changes to remote clients or reconfiguration of Internet DNS.

Authentication

AccessMyLan can easily integrate with corporate authentication services such as Active Directory, RADIUS and SecurID.

Requirements

The service installs a VPN Agent on an existing Windows system on your network (e.g. your mail server). Any Windows 2000 or later system with access to the Internet can run the VPN Agent. You only need to install the VPN Agent on one system to provide access to all servers on the network.

VPN Clients are supported on Windows 2000, Windows XP and Windows Vista.

Exchange ActiveSync is supported on Windows Mobile 5/6, Nokia E-Series/N-Series, Palm Treo and iPhone 2.0 handsets.

Web Portal access is supported from any JavaScript enabled browser.
